<h3>1. CUSTOMER SEGMENT(S)</h3> <p>Who is your customer?</p> <p>Doctors who felt difficulties in finding the presence of chronic disease quickly using the report of patient</p>	<h3>2. JOBS-TO-BE-DONE / PROBLEMS</h3> <p>Which jobs-to-be-done (or problems) do you address for your customers? To predict and detect the presence of chronic disease using the patient report</p>	<h3>3. CUSTOMER CONSTRAINTS</h3> <p>What constraints prevent your customers from taking action or limit their choices?</p> <p>By using the web application which inbuilt using machine learning model makes easy to find the presence of chronic disease instantly</p>	<h3>4. AVAILABLE SOLUTIONS</h3> <p>Which solutions are available to the customers when they face the problem</p> <p>or need to get the job done?</p> <p>There are solution models available with different algorithms. Here we have used ensemble technique to build the model and created a web application using flask connectivity</p>
<h3>5. CUSTOMER SEGMENT(S)</h3> <p>Who is your customer?</p> <p>Doctors who felt difficulties in finding the presence of chronic disease quickly using the report of patient</p>	<h3>6. JOBS-TO-BE-DONE / PROBLEMS</h3> <p>Which jobs-to-be-done (or problems) do you address for your customers? To predict and detect the presence of chronic disease using the patient report</p>	<h3>7. CUSTOMER CONSTRAINTS</h3> <p>What constraints prevent your customers from taking action or limit their choices?</p> <p>By using the web application which inbuilt using machine learning model makes easy to find the presence of chronic disease instantly</p>	<h3>8. AVAILABLE SOLUTIONS</h3> <p>Which solutions are available to the customers when they face the problem</p> <p>or need to get the job done?</p> <p>There are solution models available with different algorithms. Here we have used ensemble technique to build the model and created a web application using flask connectivity</p>
<h3>9. CUSTOMER SEGMENT(S)</h3> <p>Who is your customer?</p> <p>Doctors who felt difficulties in finding the presence of chronic disease quickly using the report of patient</p>	<h3>10. JOBS-TO-BE-DONE / PROBLEMS</h3> <p>Which jobs-to-be-done (or problems) do you address for your customers? To predict and detect the presence of chronic disease using the patient report</p>	<h3>11. CUSTOMER CONSTRAINTS</h3> <p>What constraints prevent your customers from taking action or limit their choices?</p> <p>By using the web application which inbuilt using machine learning model makes easy to find the presence of chronic disease instantly</p>	<h3>12. AVAILABLE SOLUTIONS</h3> <p>Which solutions are available to the customers when they face the problem</p> <p>or need to get the job done?</p> <p>There are solution models available with different algorithms. Here we have used ensemble technique to build the model and created a web application using flask connectivity</p>

<p>3. TRIGGERS</p> <p>TR What triggers customers to act? They need to travel to hospital and wait for a long time to visit doctors to check whether they have chronic disease or not.</p>	<p>10. YOUR SOLUTION</p> <p>SL We have collected dataset from kaggle. After doing preprocessing, we have developed both regression and classification model. Regression model is built with RandomForestRegressor and classification model is built with RandomForestClassifier. The finally our model is fit with html pages to have good user interface. This was connected using Python flask web framework.</p>	<p>8. CHANNELS OF BEHAVIOUR</p> <p>CH 8.1 ONLINE What kind of actions do customers take online? Customers need to enter their details in our web frame work to get final results in online</p> <p>8.2 OFFLINE What kind of actions do customers take offline? The need to have their medical report details.</p>
